

Don't you wish you could see them again?

Robert and Joan had a tradition. On their wedding anniversary, they would watch their wedding video over champagne. They enjoyed seeing their old friends the way they were back then, and that special moment when they exchanged vows. They started out watching it yearly, but they grew worried about wearing the tape out, so they changed it to every few years. But it wasn't quite the same for them.

They took their VHS tape and made a DVD that they can watch over and over again without worrying about wearing it out. Now they can go back to their yearly schedule and keep those memories precious.

Atlanta Media Transfer has the expertise to make sure that video, audio, and information aren't lost to obsolescence. Give us a call at [number] or visit us at [website] to learn what we can do for *your* memories.

Don't you wish you could see them again?

Fred had a Super 8 camera and loved to use it. The format had just been introduced in 1965 and he was determined to get his money's worth from his new camera. He filmed trips to the beach, backyard pool parties, birthday parties, Thanksgivings, Christmases and more. He was left with a great historical record of life in the 60s and 70s, as his children grew up and the places they used to go to closed and disappeared.

He converted all of his Super 8 reels into digital video files so he could easily share them with his children and keep those memories preserved for another generation.

Don't you wish you could hear them again?

Monica was the lead singer of an all-female goth band called Ariadne's Thread back in the 90s. They had some local and regional success, putting out a CD that ultimately sold out. Both the demos and the masters for the album were stored on Digital Audio Tape (DAT), which was a popular and affordable recording medium at the time. Unfortunately, it fell out of favor, so that her music couldn't be heard anymore.

She took her DAT recordings and transferred them to CD and high-quality digital files. Now Monica can put her music up on iTunes and other digital music services, to present her work to a whole new audience and make sure her music is more than just memories.
